GigaHash Hashing Solutions

''Ethereum Cloud Mining Made Easy''

Table of Contents

About Our Project

If you've ever mined any sort of cryptocurrency then you know, this by itself isn't a simple task. Even having to set everything up can be quite bothersome. Let alone how expensive it could potentially be now that the third bitcoin halving has already come and gone, or even how dangerous it can be with all the wiring and fire hazards that come with cryptocurrency mining. There's just tons of unnecessary troubles that come along with this sort of thing, that could put some if not a lot of people at risk.

Plus let's just face it, not everyone has the money to have access to all the fancy mining companies or to even get the chance to use all the shiny equipment that's at our disposal out there. Plus not everyone knows how to do all the technical work paired with mining as well. So to leave all the technical jargon out, that's basically where we come in. We want to be able to provide cost-efficient mining contracts to the general public that will not only be profitable for the miners but the people behind the contracts because we like to think that everyone should be able to have access to cryptocurrency and/or cryptocurrency mining as a whole.

GigaHash Hashing Solutions is making cloud mining easy for everyone, we want to make it easy enough to mine cryptocurrency so that anyone can do it, even your grandparents! With multiple people claiming bitcoin is only a bubble, the fact is that it is here to stay and we sure believe in its untapped potential so we are looking to create a better future for the cloud mining ecosystem.

Version 1.0.0(6/1/20)

Mission & Vision

We think that the first thing that any cloud mining company should offer is the constant availability of cheap contracts. That is why we are proud to announce that we are offering our lowest contract of 1 MH(1000 KH) with a price of 1000(1K) tokens which if you think about it is 1000 hashes (1KH) per token.

Our program allows us to disperse tokens at a cheaper value to our potential customers so that when our mining servers do go live anyone who purchased from our initial coin offering may have already doubled or even tripled their initial investment by using our mining contracts. We hope to launch and give our customers up to 5x return on their investments, and that's nothing to take lightly.

Another way we want to keep this going is by adding onto the mining capabilities, at this point, we can only mine so much so at this point it's not even remotely profitable to even give it a try because we'd just bankrupt ourselves before we even started and that's the sad truth

To start to build this company we will need funding from people like you, we cannot do this alone. We know that starting a company is very stressful, so that's why we want to be as transparent as possible and give back to the community during the whole process.

We hope to give our future customers as much as we can in return for any sort of contribution that they make towards our company. We are offering tons of rewards and bounties for our customers so they can also make some free tokens because come on who doesn't love free money?

Version 1.0.0(6/1/20)

Incentives

With our platform, we want to give people the incentive to keep up with us! There are tons of tokens that we are willing to pay out monthly for your participation, we think you should be paid for getting our name out there. We have come up with a marketing strategy that will not only help us but also keep your pockets lined with tokens. The only thing we ask for is to say good things about us, otherwise, we can't pay you for your contributions.

The first of the rewards we are offering is a 1000 GHT bounty for the first time you write a post outside of any social media platform. This can be any website featuring a blog or forum which can lead to more exposure for our company and programs.

The next reward we have to offer is a 1000 GHT for the first five posts you create on a social media platform about our company or programs. This can be Facebook, Twitter, Instagram, etc. or even for creating a video on YouTube or any other video platform, or all of these platforms.

Another reward we are offering is a 1000 GHT the first three times you can mention anything good about us on social media or any type of blog or forum. This doesn't have to be a full post, this can be anything like a small brief post about us.

The last of these rewards is 1000 GHT for anyone who refers a friend and can prove that they have sent the other party a detailed message about our company, project, or rewards programs. This can be a simple screenshot of a text message.

*To be able to claim any of these rewards we will have to verify that you gave us a good mention and were able to give us a good impression.

Opportunities

Our team here at GigaHash know's that this is a huge project, we know we won't be able to do this all by ourselves. That is why we are seeking out the help of certain individuals who want to be a part of our team because we believe that Together Everyone Achieves More is the real meaning of team, and since we are already looking for an even better team for the future we would love to have our team members come together for something even more exciting than we ever thought possible!

During the entirety of this project, we will be seeking out help from the community, depending on what you may already have the knowledge in, we may need your assistance! There is a lot of work that needs to be done from web development to project management, so we will be accepting new applicants over time and as our business moves forward then we will be bringing in more members into the project.

If there is anything we would be needing during this time would not only be your patience but also your dedication. If you think you have what it takes to be able to make this project happen then, by all means, feel free to send in your CV or a resume/cover letter to our support email or find the form featured on our homepage if that's more convenient for you. If there is anyone that you may know that fits the description this entails then send them a link to our website or this whitepaper and let them decide if this is the project for them.

Future Endeavors

There are quite a bit of plans we have at the moment, and of course, as time goes on we are hoping to add onto any plans we may already have. But of course, everything comes in time because as the saying goes Rome wasn't built in a single day

Our main goal is to be officially set up and mining not only ethereum within two full years, so we hope to have everything up and running by the year 2023 if not sooner! We cannot stress this goal enough, that is why we are offering a huge percentage of rewards to the community for putting our name out there.

Another huge plan of ours is to have a semi-functional website by the year 2022, where users can register for an account and login to their already existing accounts, purchase tokens for use within our platform to stake until we are fully functional, and a dashboard section where users can see their potential earnings when we go live.

We plan to incorporate public and private chat rooms where users can chat with others, a messaging system where users could have conversations with other users on the platform, and a profile section where users can create a basic profile and add other users for easier contact.

With the demand of collectibles in this day in age, we think it would be an amazing idea to release some sort of collectible tokenized asset which users can trade with other users, and these collectibles could be redeemed for our own GigaHash Token's(GHT). This feature is still just an idea, but this is something we would like to implement into our platform sometime in the future.

Token Information

GigaHash Token [GHT]

TOKEN NAME   GigaHash Token

TOKEN SYMBOL   [GHT]

TOKEN DECIMALS   18

TOKEN SUPPLY   1,000,000,000[1B]

~~~~~~
~~~~~~

0.01 ETH = 1000 GigaHash Tokens — $10.00 USD

0.1 ETH = 10,000 GigaHash Tokens — $100.00 USD

1 ETH = 100,000 GigaHash Tokens — $1000.00 USD

For every 0.1 ETH spent you will receive an extra 1000 GHT

Token Allocation

50%/ 500M   ICO at 0.01 ETH = 1,000 GHT

25%/ 250M   Staking For Future Programs

10%/ 100M   Funds To Pay Employees

10%/ 100M   Rewards For Advertising

5%/ 50M   All Airdrop Rewards

Conclusion

We want to keep things simple for now and make sure we can get some people behind us to back our project, we are counting on everyone including you to help us make this project work.

We want to make mining easily and accessible for anyone and everyone, since it's only going to be getting harder to mine cryptocurrency from here on out we figure it should only be able to be accessed at a few clicks of a button.

We just want to be able to give back to the crypto community after it's given so much to all of us, it's only right we make this happen in return. So, if there's anything you think you can help contribute to our project to make it better please let us know at our support email. Thank you!

Version Info

Version 1.0.0(6/1/20) — Created a basic whitepaper with the basic message of our project. Included ICO address and QR code.
